OPERATION BULLETIN

THE GARMENT OPERATION OPTIMIZER

Get Started 

What is Quick OB?

Quick OB is a cloud-based application for operation bulletin planning. It enhances efficiency by reducing the time spent on key tasks like SMV calculation, production planning, and performance tracking.

Who Benefits and Why?

- **Industrial Engineers:** Quick OB Creation, Reduce SMV calculation time, improve planning accuracy.
- **Line Writers:** Streamline data entry and access real-time production data.
- **Supervisors:** Monitor production and performance in real-time.
- **Management:** Access detailed reports on production, performance, and efficiency.

From Date 01/08/2024		To Date 09/10/2024		Search		Download	New Time & Study
Ts No	Date	Buyer Name	Style Description	Style Number	Total SMV	Garment	Actions
6	17/09/2024	RELIANCE	2A-NAVY	2A	37.4		  
2	04/09/2024	MAX LIF Corporation	T-SHIRT(ROUND NECK)	CH1001	10.2		  
1	02/09/2024	MARCOPOLO LIMITED	Mens Long sleeve Shirts	MAR0909	18.72		  

What is an Operation Bulletin (OB) and Why is it Needed?

- OB is a document that outlines the sequence of operations in garment production.
- It's essential for efficient production planning, SMV calculation, and resource allocation.
- It ensures standardized operations, enhancing productivity.

What is Time Study and Why is it Important?

- Time study measures the time taken for each operation. Accurate time studies
- lead to precise SMV calculation, helping allocate the right resources and plan production. It boosts productivity by
- optimizing worker performance and machine use.

Convenience at Your Fingertips

Instant and reusable time study

Production Planning & Its Importance

Total Man Power	: 34
Work Days	: 26
M/C Required	: 31
Total Operator	: 31
Total SMV	: 10.20
Time/Pcs	: 1.01
Total Helper	: 3
Operator SMV	: 9.26
Target/Hour	: 150
Shift Hours	: 8
Helper SMV	: 0.94
Target/Day	: 1200
Order Qty	: 25000 pcs
Days Required	: 21

- Production planning ensures efficient use of resources (labor, machines).
- Helps meet deadlines, reduce costs, and improve productivity.
- It aligns production goals with factory capacity.

Production Entry by Line Writer

- Digital Data Entry
- Simplified Process
- Real-Time Updates
- Enhanced Accuracy

Hour-wise Production Reports

- Monitor production by the hour for better transparency and quick decision-making.
- Identify peak and low performance periods throughout the day.
- Adjust resources based on hourly performance.

- Measure production efficiency for each garment style.
- Identify which styles are performing well and which need optimization.
- Improve future planning by analyzing the data for different styles.

Multiple Visual Charts for Quick Analysis

QUICK OB FEATURES FOR

INDUSTRIAL ENGINEERS

01

Digitalized Operation Bulletin Planning

Our cloud-based application enables seamless operation bulletin planning, digitizing the entire process.

02

Accurate SMV Calculation

Industrial engineers can determine the Standard Minute Value (SMV) using the inbuilt time study feature, ensuring precise results.

03

Intelligent Reusability

The application intelligently notifies users of repeat style operations, allowing the reuse of operation bulletins and SMVs

04

Planned vs. Actual Tracking

Compare planned production against actual outcomes to ensure alignment

05

Efficient Planning

Quickly plan machine counts, worker allocation, style timing, single-piece time, and production costs

06

Flexible Scheduling

Adjust plans based on unit capacity, working days, hours, and overtime requirements

07

Customizable Reporting

Easily create and customize reports tailored to your needs.

08

Production Tracking

Monitor production efficiency at the unit and employee levels based on time studies.

09

Operation Bulletin Status Tracking

Stay updated on the progress and status of your operation bulletins

QUICK OB
FEATURES FOR

INDUSTRIAL ENGINEERS

QUICK OB FEATURES FOR

LINE WRITTER'S

Digital Transformation of Line Writing

Convert traditional line writing into a digital process with our mobile application. Line writers can enter production data directly into the app

02

Streamlined Data Entry

Simplify data entry by combining multiple hours, individual performance, and line performance in a single entry

03

Real-Time Efficiency Monitoring

Line writers can access planned production targets and check employee efficiency at any time

QUICK OB FEATURES FOR

SUPERVISOR

01

Instant Line Production Status

Supervisors can easily monitor line production status in real-time.

02

Employee Performance Monitoring

The application highlights high and low performers, making it easy for supervisors to identify areas for improvement

03

Detailed Hourly Reports

Access hour-wise production reports and operation details effortlessly

QUICK OB FEATURES FOR MANAGEMENT

01 **Real-Time Reporting**

Management can access reports anytime, anywhere, without relying on line writers or supervisors

02 **Comprehensive Reporting**

Get quick insights into unit-wise, line-wise, and employee-wise performance

03 **Employee Efficiency Tracking**

Evaluate employee efficiency, aiding in performance reviews and salary adjustments

04 **Transparency**

The application fosters transparency across the organization

05

Planned vs. Actual Monitoring

Continuous improvement is driven by monitoring planned versus actual production

Flexible Reporting

06

Access day-wise, style-wise, and month-wise reports

07

Customizable Reporting

Our application can generate reports tailored to your specific needs

Experienced Support

08

With over 20 years of experience in the field, we provide ongoing support and expertise

Seamless Integration

09

The application can integrate with your existing systems, subject to supplier compatibility
